

FUTON ASSEMBLY INSTRUCTIONS

STEP 1:

Re-attach the Base Frame and the Log Back.

TIP: The Futon was already pre-assembled. Line up the original screw holes for the proper fit and easiest assembly. A drill bit has been included to fit the screw style.

STEP 2:

Insert the support logs in the back. Get the lag bolts started by only tightening them about an inch so that there is plenty of room to insert the Futon Back. Slightly tightening helps to keep things together.

Tip: 2 people are ideal to help hold things while the pieces are put together. Do not fully tighten any screws/bolts until the entire chair is assembled.

STEP 3:

Insert the futon back and seat into the glides.

STEP 4:

Insert the 1x2 into the front notch with the arrow facing out.

Tighten the support logs from step 2, and then secure the 1x2 to the frame through the pre-dilled holes on the ends.

Arrow

	<p>STEP 5:</p> <p>If it is not already attached, attach the Log Trim to the front of the frame.</p> <p>Tip: Re-align the previously drilled holes</p>
	<p>STEP 6:</p> <p>Unzip the white mattress cover that is protecting your mattress and design cover and then place the mattress on the frame.</p> <p>Enjoy your Futon!</p>

Putting the Futon Up and Down:
